THE STRUCTURAL MORPHOLOGY OF QUARTZ.

61-14761

Trans. of Société Française de Minéralogie et de
Cristallographie, Bulletin, 1959, v. 82, p. 335-340.

DESCRIPTORS: *Quartz crystals, Quartz, *Crystal
structure.

A study is presented of the agreement between crystal-
line structure and morphology of ternary quartz. The
absence of the base can be explained by assuming that
the growth units are SiO_2 or Si_2O_4 molecules. The α -
prisms and the two x and z rhombohedra are of the P
type. The α (112) and z (5161) forms are of the S type.
The faces of the trapezohedron (5161) are nearly paral-
lel to the direction, in which the interaction energy of
the P.B.C. is zero. (Author)

A description is given of an apparatus for the simul-
taneous tracing of the curves of gravimetric thermal
analysis, differential thermal analysis, and temper-
ature of the sample as a function of time, from a very
small sample (3 dg at most), up to the temperature of
1250 deg C. The analyses can be carried out in a
defined atmosphere or in a controlled gaseous stream.

Order from SLA \$1.10 63-16241

DESCRIPTORS: *Dolomite, *Calcite, Identification,
Fluorescence, Uranium compounds, Salts, Ammonium
compounds, Phosphates.

A new method of differentiation between calcite and
dolomite is described on the basis of the fact that
calcite acquires a bright fluorescence, when it is
attacked by a solution of uranium salts, after having
been treated with a solution of ammonium phosphate.
This method is then compared with the silver chromate
method. (Author)
